Education

M.Sc. at the University of Alberta

Computing Science 2022-Now

B.Sc. at the University of Tehran

Computer Engineering 2017-2022

- Focused in Software Engineering
- Thesis: Persian Address to Postal-Code Converter (Grade: 19.88/20)
- GPA: 18.21/20

Minor in Computer Science

- GPA: 17.16/20

Research Experience

2021-Now Spiking Neural Networks Framework Spiral

Python Comp-Neuro SNN PyTorch

Spiral is a python package for spiking neural network (SNN) simulation using PyTorch on CUDA or CPU. It tries to bring its design as close as possible to biological observations of how the nervous system functions. I am designing and developing this framework under the auspices of the Computational Neuroscience Research Lab (CNRL) at the University of Tehran.

By-products:

- Add-On Class
- Construction Requirements Integrator
- Matplotlib Dashboard
- Constant Properties Protector

2020-2021 Persian Address to Postal-Code Converter PAT

Python NLP NLTK Persian Data-Collection

Persian Address Tracer (PAT) is one of the most successful and intelligent systems used for converting the Persian text of an address to a postal code. It is worth mentioning that this is a complicated issue due to the special conditions in the Persian language and the lack of standards in addressing in Iran.
