Research Experience

2021-NOW **Spiking Neural Networks Framework** Spiral 

Python Comp-Neuro SNN PyTorch

Spiral is a python package for spiking neural network (SNN) simulation using PyTorch on CUDA or CPU. It tries to bring its design as close as possible to biological observations of how the nervous system functions. I am designing and developing this framework under the auspices of the Computational Neuroscience Research Lab (CNRL ) at the University of Tehran.

By-products:

- Add-On Class 
- Construction Requirements Integrator 
- Matplotlib Dashboard 
- Constant Properties Protector 

Assoc. Prof. Mohammad Ganjtabesh 

2020-2021 **Persian Address to Postal-Code Converter** PAT 

Python NLP NLTK Persian Data-Collection

Persian Address Tracer (PAT) is one of the most successful and intelligent systems used for converting the Persian text of an address to a postal code.

Assis. Prof. MohamadAmin Sadeghi 

2019-2020 **House Prices Estimation over Tehran** 4-Choob 

Python Numpy Shapely PostgreSQL Q-GIS PostGIS

4-Choob was a project aiming at automating house price estimation over Tehran. I was tasked with extracting features, and the result was the extraction of more than 400 efficient price-forecasting features.

Assis. Prof. MohamadAmin Sadeghi 

Books

2020-NOW **Discrete Mathematics** OpenBookshelf 

TeX Discrete Mathematics Persian Open-Source

I lead a group of volunteers who are writing an open-source Persian book on discrete mathematics.

By-products:

- TeX Persian textbook template 
- Common Mistakes in Discrete Mathematics
